

VALENTINE'S DAY HEALTH

Valentine's Day is a great time to celebrate love and can be a reminder to make healthy choices part of your everyday life. Whether you celebrate Valentine's Day on your own or with someone else, take steps to be a healthy valentine.

BE ACTIVE AND EAT HEALTHY

- **Plan an activity** that encourages physical fitness. Regular physical activity can help control your weight, reduce your risk of heart disease and some cancers, improve mental health and mood, and increase your chance of living longer. Adults need 2 hours and 30 minutes (150 minutes total) of activity each week. You can break it up into smaller chunks of time during the day. It's about what works best for you, as long as you are doing physical activity at a moderate or vigorous effort for at least 10 minutes at a time.
- **Treat yourself** and loved ones to a meal that includes healthy options and foods low in saturated fat and salt, and limit sweets. Nutrition plays an essential role in maintaining overall health.
- **Limit alcohol consumption.** Excessive alcohol use can lead to long-term health problems, including heart disease and cancer.

KEEP ACTIVE THIS HOLIDAY SEASON: TAKE A WALK IN THE MALL!

The holidays are here again! Not only does this festive season bring eggnog, cookies, candy canes, and stuffing with extra gravy, in many areas it also means cooler temperatures. Although being physically active can help you avoid some holiday weight gain, what should you do if it is too cold or icy outside? Why not beat holiday shoppers to your nearest mall for a morning walk?

Although mall walking can be done by almost anyone, it tends to be most popular among people who are middle-aged and older. This isn't surprising, because malls have features that make walking in them particularly appealing to older adults. They are protected from the weather, are well lit, have flat and even walking surfaces, have convenient restrooms, and have seats and benches where one can rest for a little while in the middle of the walk.

Does mall walking sound like something you'd like to try? If so, you can do it by yourself, or you can call a few friends to meet you there and walk with you. If you need a more formal, structured program to get you out of bed and into your sneakers, check to see if your local mall has an official mall walking program. If not, you can become a mall walking champion and work with mall

leadership to help establish one! Mall walking programs can provide safe, convenient, and warm places for you to be active this season.

Regular physical activity, including walking, can help lower your risk for heart disease, stroke, Type 2 diabetes, depression, and some cancers. These diseases occur more often as people get older. Regular physical activity can also help control weight, improve sleep, and, for older adults, help maintain independence, reduce the risk of falling down, and delay the start of mental decline, like being forgetful.

Even with all the benefits of physical activity, adults who are middle-aged and older are among the most physically inactive groups in the country. Walking is a great way for you to be physically active, because it doesn't require special skills and can be done at almost every activity level.

Mall walking is a great way to get moving. Also, during the busy holiday season you can use it to get in your recommended physical activity while enjoying the mall's holiday decorations and music. Then, when the shops open, you can take advantage of where you are to do some shopping for your kids and grandkids!

Valentine's Day HEALTH

continued from page 1

If you do choose to drink, do so in moderation, which is no more than one drink a day for women and up to two for men. Do not drink at all if you are pregnant, under the age of 21, or have health problems that could be made worse by drinking.

CELEBRATE AMERICAN HEART MONTH

- **Know your blood pressure** and if it's high, make control your goal. Blood pressure is the force of blood pushing against the walls of your arteries, which carry blood from your heart to other parts of your body. Uncontrolled high blood pressure is the leading cause of heart disease and stroke. Work with your health care provider to come up with a plan to control your blood pressure.
- **Quit smoking**, and if you don't smoke, don't start. Smokers can receive free resources and assistance to help quit by calling the 1-800-QUIT-NOW quitline (1-800-784-8669) or by visiting the CDC's Tips from Former Smokers at <http://www.cdc.gov/tobacco/campaign/tips/>.
- **Learn the most common symptoms of a heart attack** and call 9-1-1 immediately if these symptoms occur.

The five major symptoms of a heart attack are:

- o Pain or discomfort in the jaw, neck, or back;
- o Feeling weak, light-headed, or faint;
- o Chest pain or discomfort;
- o Pain or discomfort in the arms or shoulder, and
- o Shortness of breath.

PREVENT THE SPREAD OF GERMS AND INFECTIONS

- **Wash your hands often**, get a flu vaccine, and avoid close contact with someone that is sick.
- **Prevent sexually transmitted diseases and unintended pregnancies.** To lower your risk, abstain from sex or if you do choose to have sex, use protection.

BE SAFE AND AVOID INJURY

- **Be prepared for winter weather.** Storms and cold temperatures can be dangerous for your health and safety. Plan ahead and prepare your home and car. Make sure your heating systems are working and that you have water and foods that don't need cooked or refrigerated in case of a power outage.
- **Avoid distracted driving and get to your Valentine's Day plans safely.** Distracted driving is driving while doing another activity that takes your attention away from driving. Distracted driving can increase the chance of a motor vehicle crash.

What is RESILIENCE?

Resilience refers to the ability to successfully adapt to stressors, maintaining psychological well-being in the face of adversity. It's the ability to "bounce back" from difficult experiences. Resilience is not a trait that people either have or don't have. It involves behaviors, thoughts, and actions that can be learned and developed in everyone.

Resilience is about being adaptable. It's about being flexible. It's about recognizing that we've got strengths that perhaps we never knew we had until we have to use them.

What is RESILIENCE?

continued from page 2

And like many things in life - the more we practice, the more we learn. The more we find out about resilience and certainly the more we do of it, then the more resilient we become.

Resilient people are able to adapt to stress, crises, and trauma. They find ways to bounce back from the ups and downs of life and move forward. Some people are born with a strong sense of resilience. Others may need to learn skills and develop resilience. If you would like to become more resilient, these tips and information can help. Remember that resilience is a skill, like riding a bike. The more you practice, the better you'll be.

Ways to become more resilient:

Resilience isn't about "toughing it out" or reacting to every setback with a smile. Resilient people still feel sad, angry, or frustrated when faced with a setback. But they find ways to move forward, to tackle challenges with creativity, hope, and a positive attitude.

Here are some ways to increase your resilience:

- **Maintain a sense of perspective.** Ask yourself, "How big is this problem really?" and "What do I need to do?" Remember not to blow things out of proportion or catastrophize, remind yourself of the good in your life and that things really will change.
- **Recognize that you have a choice in how you handle challenges.** You can't control what happens to you, but you can choose how you respond. You can choose to react to changes and problems with hope and a positive attitude.
- **Accept change.** Change and uncertainty are part of life. When you accept this, you'll be better able to react to change with flexibility.
- **Anticipate challenges** by focusing on the positive ways in which you can meet them rather than possible negative outcomes. This will help you feel more in control and less overwhelmed.

- **Learn how to calm yourself.** When you feel yourself reacting to a challenge with escalating stress and anxiety, take steps to calm yourself (deep breathing, replacing negative thoughts).
- **Overcome your fear.** All of us feel fear, especially when we're faced with a change. But fear can hold us back from new experiences and opportunities for growth. If you are faced with a challenge that feels scary or overwhelming, start with the simplest thing you can do that takes you in the direction you want to go. Ask yourself, "What's the smallest thing I can do to get started?" Once you've thought about it, do it.
- **Let go of your anger.** A difficult challenge can cause us to feel angry and upset. These feelings are normal, but they won't help us move forward. Work through your anger and try to let go of negative feelings by writing about them or talking with a trusted friend.
- **Take action.** Avoid dwelling on problems. Focus on solutions instead. Figure out what you can do and then do it, one step at a time.
- **Laugh.** Even when things seem to be falling apart around you, try to find time to smile and laugh. It's very healing and it will help you forget your worries for a few moments. Rent a movie that makes you laugh or spend time with a friend who has a good sense of humor.

HOW TO BUILD a \$1,000 Emergency Fund in 10 Months

Do you have \$1,000 set aside for emergencies? If you already do, you could probably use another \$1,000 in that account. Experts recommend keeping at least 3 months of expenses in a reliable, liquid account—though even an extra \$1,000 can be a lifesaver. But finding \$1,000 to save isn't always easy.

GET STARTED WITH THESE FOUR STEPS.

1. Find a safe place to save your money. You will want to save your money in an account that you can access easily in case of an emergency. That means you should probably not keep these savings in a U.S. Savings Bond or in mutual funds. Choose a traditional savings account or a short-term certificate of deposit (CD), currently the most attractive accounts. Early withdrawal penalties on a CD rarely lower the yield below that of a savings account. Consider opening a new account or subaccount for this money so you're not tempted to spend it. Most importantly, do not keep savings in a checking account, which pays no or low interest and is too easy to access.

2. Save \$100 a month. If you are already saving \$100 a month, great! Skip to step 3. If not, you need to either earn \$100 more a month or cut back in order to find that \$100 to save. It can also help to pay yourself first and save the \$100 at the beginning of the month instead of waiting to see if you have money left over to save at the end of the month.

3. Automate your savings. Setting up an automatic way to save is one of the best ways to save. Once you set it up, then it happens without your having to think about it. Here are two ways to automate your savings. Every pay period, ask your employer to deduct \$100 from your paycheck and transfer it to a savings account. Ask your HR representative for more details and to set this up. Or, ask your bank or credit union to transfer \$100 from your checking account to a savings account every month. Talk to your local bank or credit union to set this up.

4. Watch your savings grow for 10 months. The final step is to sit back and watch your savings grow. How often do you look at the calendar and realize it's half way through the year already? The same will apply to your savings. Before you know it you will have that \$1,000. The key is not to touch the money unless you have an emergency—that's what the money is there for, after all.

*Once you have at least \$1,000
in your emergency account,*

continue your savings success, and continue to build your emergency savings or apply that money to a new savings goal. Perhaps you have debt you need to pay down or want to save for a car or home.
